MODIFICATIONS IN THE REFRACTIVE INDEX AND DENSITY OF HYDROCARBONS DURING HYDROGENATION AND ISOMERIZATION (Aenderung des Brechungsindex und der Dichte von Kohlenwasserstoffen beim Hydrieren und Isomerisieren). [1960] [10 p. 19 refs.]
Order from SLA m\$1.80, ph\$1.80

61-10481

Trans. of Erdöl und Kohle (West Germany) 1957,
v. 10, no. 7, p. 428-429.

Refractive indexes and densities change when olefins and aromatics are hydrogenated or when saturated hydrocarbons are isomerized. The change in refractive index divided by the change in density being 0.85-1.0 for hydrogenation and ~0.45 for isomerization. As shown for a German crude, an anthracene oil, and a pitch, saturation and isomerization occurring during hydrogenation of aromatics can be determined from a refractive index vs. density curve plotted during the process.
